**J. Other Works Connected with my Scholarly Field**

Responsible for creating and recoding two online courses: statistics and finance, Ono College.

**K. Submitted Publications**

**L. Summary of my Activities and Future Plans**

My research interests are largely directed towards the field of behavioral finance. During my PhD studies, I have investigated the issue of home bias, from different aspects, behavioral as well as economic. Home bias is a well-known and widely investigated phenomenon in the finance literature. It is described as the tendency of investors to invest excessively in local assets. The optimization of capital asset portfolios is a key factor in capital formation, economic growth and long-term savings. Although international portfolio theory states that an optimal portfolio should be well diversified, in practice, investors prefer to invest local assets. My research included empirical as well as experimental analysis methods. My work has shown that behavioral reasons have a key role in the existence of the home bias phenomenon.

My future purpose is to continue my research in behavioral finance. I intend to continue my investigation on the home bias phenomenon, and to examine additional behavioral factors that might influence home bias. Additionally, I aim to investigate other behavioral finance issues such as capital market anomalies and behavioral heuristics affecting investors choices.
