

DIPLOMA SUPPLEMENT

Higher Education System in Israel

Degrees

Higher education in Israel is a three-tiered system offering Bachelor's, Master's and Doctoral degree programs. Programs granting Bachelor's degrees (e.g., BA, BSc, BSN, BSW) usually last three or four years. Completion of this first degree qualifies students for admission to subsequent degree programs. Master's degree programs generally last two years and offer a thesis or non-thesis tracks. Students who complete a Master's degree with a research track are eligible for admission to Doctorate programs. Each university determines additional admissions requirements. Doctorate programs generally last four to six years and are offered in various disciplines.

Access to Higher Education

Israeli institutes of higher education generally require a matriculation diploma and a standardized psychometric examination. The exact requirements vary depending on the institution and field of study. Programs may have additional requirements such as entrance interviews, examinations, or artistic portfolios. Admission requirements for all programs are determined on a competitive basis by the institution and are approved by Israel's Council for Higher Education (CHE).

Types of Higher Education Institutions

Israel has 61 academic institutions: nine universities (including the Open University) and 31 academic colleges that award Bachelor's and Master's degrees. Currently, only research universities offer research PhD degrees.

Government Agencies

The Council for Higher Education (CHE), established according to the Council for Higher Education Act 1958, is the regulatory body responsible for the academic aspects of all institutions of higher education in Israel. According to the Council for Higher Education Act, higher education institutions are accredited by the Quality Assessment Division of the CHE at the study program level in universities and colleges.

Ruppin Academic Center

With 5000 students, Ruppin Academic Center (RAC) is one of the largest public colleges in Israel. It was established in 1949 by Israel's first Prime Minister, David Ben Gurion.

Today, RAC awards 21 undergraduate (BA, BSc, BSN, BSW) and graduate degrees (MA, MBA, MSc) in Marine Sciences, Engineering, Social and Community Sciences, Economics and Management. RAC offers innovative study programs committed to developing knowledge and professional competencies that address Israel's most vital social and economic challenges.

Ruppin Academic Center has been consistently awarded top ratings in satisfaction surveys conducted among Israel's higher education student population.

The Ruppin Academic Center has four faculties:

The Faculty of Economics and Business Administration awards BA degrees in Economics and Accounting, Economics and Management, Business Administration, and a Global Master's in Business Administration (MBA).

The Faculty of Social and Community Sciences awards Bachelor's degrees in Behavioral Sciences (BA), Nursing Sciences (BSN), and Social Work (BSW) and Master's degrees in Immigration and Social Integration, Organizational Psychology, Clinical Psychology (with thesis), and Clinical Psychology of Adulthood and Aging.

The Faculty of Engineering awards BSc degrees in Industrial Engineering and Management, Computer Engineering, Electrical and Electronics Engineering, Computer and Information Sciences, and MA degrees in Logistics and Global Supply Chain.

The Faculty of Marine Sciences awards BSc degrees in Marine Environmental Sciences and Marine Biotechnology, Master's degrees in Marine Resource Management and MSc degree in Marine Sciences (with thesis).

The Faculty of Engineering awards BSc degrees in Industrial Engineering and Management, Computer Engineering, Electrical and Electronics Engineering, Computer and Information Sciences, and MA degrees in Logistics and Global Supply. The Faculty offers a variety of programs and specializations tailored to the high-tech industry's current and anticipated future needs. The Faculty is at the forefront of Israel's colleges. In addition to basic studies in engineering and sciences, it offers select content and majors that open the door to a wide range of employment opportunities in engineering in general and in the areas of specialization. As part of the undergraduate programs, students have access to advanced labs that cover the latest technologies and disciplines in electrical engineering and electronics, computer engineering, computer and information sciences, and industrial engineering and management.

The Faculty offers four CHE-accredited undergraduate programs: BSc degrees in Electrical and Electronics Engineering, Computer Engineering, Computer and Information Sciences, and Industrial Engineering and Management, and a CHE-accredited MA in Logistics and Global Supply Chain.

Undergraduates (BSc) in Computer Engineering – Profile

Graduates of the Computer Engineering Department will be able to:

- Work professionally in any of the following fields – software systems, computer-based systems, cyber security, algorithm design, digital electronics, development of chips and Very Large-Scale Integration (VLSI), machine learning, artificial intelligence, and digital signal processing;
- Identify, characterize, and solve engineering and technological problems using relevant knowledge from the fields of mathematics, engineering, and technology;
- Perform standard measurements of quantitative parameters using various measurement tools; plan and carry out experiments; assess the results, draw conclusions, and apply the results to improve technological processes and systems;
- Apply appropriate statistical and probabilistic methods, signal transforms, graph algorithms, or differential equations needed to analyze and manage electronic systems;
- Analyze problems in software-intensive systems and develop software in a variety of environments and operating systems, server/client systems, real-time systems, and computer-embedded systems;
- Analyze, design, implement, and execute integrated hardware/software systems;
- Use machine learning algorithms and artificial intelligence to explore, identify, and analyze data patterns;
- Work effectively as a member or leader of a technical team;
- Communicate in writing and orally in technical and non-technical environments;
- Learn independently and recognize the importance of ongoing learning for professional development.
